

Type 1017 General Service Gauge Available With PLUS!™ Performance Option

- Available in 4½" and 6" dial sizes
- Solid front case style, black epoxy painted aluminum case
- Hinged-steel black enamel texture finish panel ring

The Ashcroft® Type 1017 pressure gauge is the most economical of the general service industrial gauges when flush panel mounting is required.

PRODUCT SPECIFICATIONS

Model Number: 1017

Accuracy: 1% full scale (Grade 1A,

ASME B40.100)

Vac., compound to 20,000 psi Ranges:

41/2" or 6" diameter Dial Size:

Case Material: Black epoxy coated aluminum

Slip-fit steel ring, black Ring: textured enamel

Glass

Window:

Dial: Aluminum, white background,

black figures and intervals.

Pointer:

Rotary, 400 SS, Teflon® coated Movement: pinion gear and segment

Phos. bronze/brass brazed (A)

Bourdon Tube and Socket: 316L SS/316L SS (S)

K Monel/ Monel (P)

Connection

Size: 1/4, 1/2 NPT

Connection

Location: Back only Mounting: Panel

OPTIONAL FEATURES

Overload Stop XOS **Underload Stop XVS** Throttle Plug (.031) Thread-in XTS The following Table is not for conversion purposes.

STANDARD RANGE TABLE

Pressure							
kg/cm2 - bar	kPa						
0/1	0/100						
0/1.6	0/160						
0/2.5	0/250						
0/4	0/400						
0/6	0/600						
0/10	0/1000						
0/16	0/1600						
0/25	0/2500						
0/40	0/4000						
0/60	0/6000						
0/100	0/10,000						
0/160	0/16,000						
0/250	0/25,000						
0/400	0/40,000						
0/600	0/60,000						
0/1000	0/100,000

TEMPERATURE LIMITS							
	Ambient	Process	Storage				
Dry	-20/200°F (-29/93°C)	-20/250°F (-29/121°C)	-40/250°F (-40/121°C)				

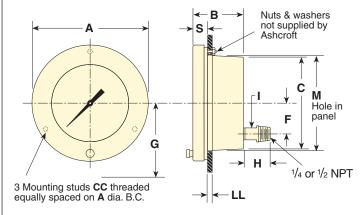

Note: Other than discoloration of the dial and hardening of the gasketing that may occur as ambient or process temperatures exceeds 150°F, non-liquid-filled gauges with standard glass windows, can withstand continuous operating temperatures up to 250°F (121°C). Accuracy at temperatures above or below the reference ambient temperature of 68°F (20°C) will be affected by approximately .4% per 25°F (4°C). Gauges with welded joints will withstand 750°F (450°F (232°C) with silver brazed joints) for short times without rupture, although other parts of the gauge will be destroyed and calibration will be lost. For continuous use and for process or ambient temperatures above 250°F (121°C), a diaphragm seal or capillary or siphon is recommended.

Type 1017 General Service Gauge Available With *PLUS!*™ Performance Option
